

## Chapter-08

### Introduction to Trigonometry

- Trigonometry is the branch of Mathematics which deals with the measurement of sides and angles of the triangles.

- In a right triangle ABC, right-angled at B,

- $\sin A = \frac{\text{side opposite to angle } A}{\text{hypotenuse}}, \cos A = \frac{\text{side adjacent to angle } A}{\text{hypotenuse}}$

$$\tan A = \frac{\text{side opposite to angle } A}{\text{side adjacent to angle } A}$$

$$\operatorname{cosec} A = \frac{1}{\sin A}; \sec A = \frac{1}{\cos A}$$

$$\cot A = \frac{1}{\tan A}, \tan A = \frac{\sin A}{\cos A}$$

- If one of the trigonometric ratios of an acute angle is known, the remaining trigonometric ratios of the angle can be easily determined.
  - The values of trigonometric ratios for angles  $0^\circ$ ,  $30^\circ$ ,  $45^\circ$ ,  $60^\circ$  and  $90^\circ$ .
  - The value of  $\sin A$  or  $\cos A$  never exceeds 1, whereas the value of  $\sec A$  or  $\operatorname{cosec} A$  is always greater than or equal to 1.
  - $\sin (90^\circ - A) = \cos A$ ,  $\cos (90^\circ - A) = \sin A$ ;
  - $\tan (90^\circ - A) = \cot A$ ,  $\cot (90^\circ - A) = \tan A$ ;
  - $\sec (90^\circ - A) = \operatorname{cosec} A$ ,  $\operatorname{cosec} (90^\circ - A) = \sec A$ .
  - $\sin^2 A + \cos^2 A = 1$ ,
  - $\sec^2 A - \tan^2 A = 1$  for  $0^\circ \leq A < 90^\circ$ ,
  - $\operatorname{cosec}^2 A = 1 + \cot^2 A$  for  $0^\circ < A \leq 90^\circ$ .
-
